May 24, 2021

LBIHD Reports no new Covid-19 infections since May 11th

The Long Beach Island Health Department reported no new laboratory confirmed infections of Covid-19 within the jurisdictions of Long Beach Island since May 11, 2021. This is a significant milestone in the fight to control Covid-19 with a vaccine campaign starting locally on January 4th 2021.

This reprieve is hopefully a permanent reality from the high case activity of infectious disease we had just a few months ago. The Health Department emphasizes the necessity to vaccinate those who have not been immunized against Covid-19. In many parts of the world, this disease is not under significant control and as we know from the start of the pandemic, no nation could completely isolate itself from this disease. The more immunized the population, the less burden of disease we will experience.

The Health Department is continuing to offer Covid-19 vaccines as it provides the best protection from Covid-19 infection, prevents transmission and keeps this highly transmissible respiratory disease from re-establishing itself in our community.

Our vaccine clinic's are held every Wednesday's from 9-11:00 am located at St. Francis Parish Hall 4700 Long Beach Boulevard, Brant Beach. We offer Moderna and Johnson & Johnson Covid-19 vaccine to those 18 and older.

Walk-In's are welcome but individuals are encouraged to register online to guarantee a time spot.
